DESCRIPTION

The Content Security Policy (CSP) is an HTTP header through which site owners define a set of security rules that the browser must follow when rendering their site. The most common usage is to define a list of approved sources of content that the browser can load. This can be used to effectively mitigate Cross-Site Scripting (XSS) and Clickjacking attacks.

CSP is flexible enough for you to define from where the browser can load JavaScript, Stylesheets, images, or fonts, among other options. It can also be used in report mode only, a recommended approach before deploying strict rules in a live environment. However, please note that report mode does not protect you, it just logs policy violations.
